

# Computer Programming, Assignment 2

Monsoon 2021, IIIT-H  
Suresh Purini

1. 100 (or any N) students took a course on economics. The final marks (out of 100) of all the students is provided via keyboard. If the input marks does not fall in the range 0 to 100, you should print an error and exit the program by displaying suitable error message. Solve the following problems by writing appropriate programs.
  - (a) If the pass mark is  $\geq 35$ , what is pass percentage?
  - (b) What is the mean, variance and standard deviation of the class?
  - (c) Compute the number of students falling within one standard deviation, two standard deviations and the rest.
  - (d) What are the maximum and minimum marks?
  - (e) Create an histogram with ranges  $[0, 9], [10, 19], \dots, [99, 100]$ .
2. There is a hotel with 100 floors and 32 rooms on each floor. All the rooms are occupied by a single male or female. Read this occupancy information via keyboard.
  - (a) Compute the percentage of males and females living in the hotel by visiting all the rooms.
  - (b) Report the percentage of males and females on each floor.
  - (c) Find the floor with maximum number of males.
  - (d) Is it possible to redistribute all the occupants so that any floor is occupied by only male or female?
  - (e) **Challenge Problem:** Solve this problem using atmost 400 bytes of memory. You can use few more bytes like 20 to 30 bytes for temporary storage.
